

## DRUMGRANGE VACANCY ADVERT

### PRODUCT SAFETY ENGINEER

**LOCATION:** PORTLAND

#### JOB PURPOSE

The Product Safety Engineer will perform the duties associated with Equipment Safety both on and off-site. This will include planning, prioritising work, supervision and ensuring that tasks are undertaken in a professional and timely manner producing all relevant documentation in accordance with relevant legislation, regulations, and contractual requirements. To work in accordance with Contract, Project Safety Management System, Safety Legislation and Drumgrange Company Manual.

**REPORTING TO:** TECHNICAL DIRECTOR

#### CANDIDATE REQUIREMENTS

- Ability to establish priorities through review of contractual, policy and legislative requirements.
- Experience establishing and working to Safety Management Systems and Plans.
- Experience in both physical and functional aspects of Safety Engineering.
- Work as part of an engineering design team with the ability to advise the product/system technical design authority on safety matters.
- Ability to produce in-depth safety cases and technical documentation (including safety management plans, documented safety assessment, hazard logs and safety case report) to MoD and other customer standards.
- Have a deep knowledge of standard risk identification, estimation and reduction techniques.
- The experience/ability to establish and maintain interfaces with both internal and external safety stakeholders including, but not limited to, customers, project teams and safety committees.
- Ability to develop and document coherent, evidence-based, structured safety arguments.
